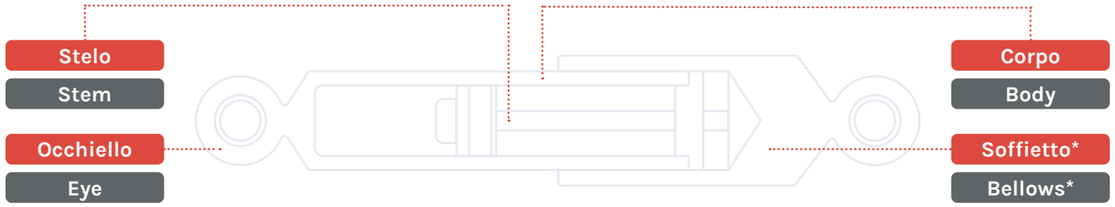
ITA

Il marchio **Lema** nasce nel 1969 e si specializzato nella progettazione, produzione e commercializzazione di ricambi per autocarri ed autobus.
Nel corso della sua crescita, il marchio sviluppa una solida competenza tecnica per la realizzazione di guarnizioni e di componenti in gomma-metallo lavorati con materie prime di elevata qualità.
La continua ricerca dell'eccellenza è data dagli accurati controlli qualitativi applicati in tutte le fasi del processo produttivo. Oggi, il marchio Lema comprende una gamma di oltre 10.000 referenze tra cui guarnizioni, parti in gomma-metallo (come boccole, silentbloc, manicotti, tubi in gomma, supporti per motori e alberi trasmissione), ammortizzatori, perni fusi e tappi carburante. Lema è un marchio private label distribuito da Dubhe Srl.
Dubhe è il distributore italiano specializzato in parti di ricambio per autocarro, veicolo commerciale, bus e rimorchio, con una forte specializzazione sui ricambi motore, cambio e differenziale.
Con oltre 50 anni di esperienza, il gruppo Dubhe offre ai propri clienti una vasta gamma di prodotti sia con marchio proprio che premium.
Grazie all'ampia conoscenza tecnica, produttiva e commerciale delle aziende fondatrici, (Mec-Diesel S.r.l., C.E.I. Costru- zione Emiliana Ingranaggi S.p.A. e Lema S.r.l.), Dubhe garantisce elevati standard qualitativi.

ENG

The **Lema** brand was established in 1969 and immediately focused on design, manufacturing, and distribution of spare parts for trucks and buses.
The brand consolidated itself over the years, developing its technical know-how for the manufacturing of gaskets and rubber-metal components processed from high-quality raw materials. The continuous pursuit of excellence is achieved through accurate quality controls applied at every stage of the production process.
The Lema brand currently offers a range of over 10.000 products, including gaskets, rubber-metal parts (such as bushings, silentblocks, sleeves, rubber hoses, engine supports and transmission shafts), shock absorbers, king pin kits, and fuel caps.
Lema is a private label distributed by Dubhe Srl.
Dubhe is the Italian distributor specialised in spare parts for trucks and commercial vehicles, buses, and trailers, with a strong specialization on engines, gearboxes, differentials, and their components.
With more than 50 years of experience, Dubhe offers a wide product range under private labels and premium brands.
Thanks to the extensive technical, production and commercial knowledge of the founding companies (Mec-Diesel S.r.l., C.E.I. Costruzione Emiliana Ingranaggi S.p.A. and Lema S.r.l.), Dubhe guarantees high quality standards.



*Negli ammortizzatori meccanici il soffietto è sostituito dalla molla.
**In the mechanical shock absorbers, the bellows is replaced by the spring.*

Part | Shock absorber example | Part

INFO TECNICHE *TECHNICAL INFO*.

Gli ammortizzatori sono i componenti che provvedono a smorzare e regolarizzare le asperità del manto stradale, fornendo stabilità al veicolo. Sono l'elemento di giunzione fra la scocca e la sospensione, agendo da cuscinetto e smorzando le varie vibrazioni provenienti dalle ruote.

Shock absorbers or dampers are the components designed to absorb shock impulses in order to guarantee an excellent damping of the road asperities and a vehicle's stability. They are the joining element between the body and the suspension, acting as a bearing and damping the various vibrations coming from the wheels.

*The OE references and pictures are for illustrative purpose.

AMMORTIZZATORI

AMMORTIZZATORI

Gli ammortizzatori trattati sono catalogabili, per la maggior parte, in due sotto categorie:

- Idraulici a doppio cilindro, composti da due cilindri metallici coassiali che scorrono l'uno sull'altro all'interno dei quali è presente olio in pressione;
- Pneumatici (principalmente applicati alle cabine dei trattori stradali) composti da un corpo metallico ed un soffietto in gomma.

SHOCK ABSORBER

The shock absorbers in this catalogue are organized in two sub-categories:

- *Hydraulic shock absorbers, composed by two coaxial metal tubes that slide on each other thanks to the pressurized oil.*
- *Pneumatic shock absorbers (mainly applied to the cabin of road tractors) composed by a metal body and a rubber bellow.*

SEGNI DI USURA *SIGNS OF WEAR*.

Gli ammortizzatori sono componenti soggetti ad usura, pertanto può capitare, durante la vita del veicolo, di incorrere in alcune principali casistiche, qui di seguito riportate, che ne precludono il corretto funzionamento

Shock absorbers are components subject to wear. Therefore, they can run into some issues that will be liable to disturb their proper functioning during the lifetime of the vehicle, such as:

*The OE references and pictures are for illustrative purpose.

PERDITA DI OLIO

Per perdita di olio si intende il versamento, all'esterno dell'ammortizzatore, dell'olio contenuto in esso con riduzione notevole della capacità di assorbimento degli urti.

È riconoscibile attraverso l'ispezione visiva e anche tattile degli ammortizzatori, ove questi risultino particolarmente unti o ricoperti esternamente da un importante strato di liquido viscoso.
A seconda del tipo di ammortizzatori e del loro funzionamento può essere normale notare delle tracce di olio sulla parte esterna del corpo ma solitamente questa prerogativa è dovuta alla lunga percorrenza effettuata, da non confondere con la perdita vera e propria che mostra tracce ben più marcate.

Le principali cause della perdita dell'olio sono:

Perdite dal paraolio:
problemi costruttivi, prolungati tratti polverosi, consumo anomalo dello stelo dovuto ad errata installazione e conseguente lavoro fuori asse

Perdita dalle saldature:
problema costruttivo

OIL LEAKAGE

The oil leakage means the pouring of the oil from the unit that causes decreasing of the shock absorption capacity.

It is recognizable through a visual and tactile inspection when the shock absorbers appear greasy or covered by a layer of viscous liquid.

According to the type of the shock absorbers and its functioning, it is normal to notice some traces of oil on the body. Generally, this sign of wear is due to the long distance run by the vehicle and not to be confused with the real and proper oil leakage that shows more evident traces.

The main causes of oil leakage are:

Oil loss from the stem's oil seal gasket:
due to construction problems, prolonged dusty routes, abnormal stem consumption due to incorrect installation and consequent off-axis work;

Leakage from body welds:
due to construction problems.

*The OE references and pictures are for illustrative purpose.

OCCHIELLI OVALIZZATI

Per occhielli ovalizzati si intende la deformazione degli occhielli, cioè i punti di ancoraggio dell'ammortizzatore, a causa di forze meccaniche esterne che agiscono in maniera impropria causando la deformazione strutturale del materiale.

È riconoscibile dal battito creato dagli ammortizzatori in fase di utilizzo e dal gioco presente muovendo l'ammortizzatore.

Le principali cause dell'ovalizzazione degli occhielli sono:

Errori di montaggio:
coppia di serraggio errata e presenza di gioco in caso di serraggio non sufficiente, materiale deformato in caso di serraggio eccessivo

Errata applicazione:
a fronte di errata identificazione prodotto e conseguente applicazione, se le misure dell'ammortizzatore non coincidono con quelle originali, le forze anomale di trazione e compressione possono portare ad una ovalizzazione degli occhielli

ELONGATED BUSHINGS

Elongated bushings refer to the bushings' deformation. They are the anchor points of the shock absorber and their wear is due to the mechanical forces that act in an improper manner causing the structural deformation of the material.

The structural stress is recognizable by the knocking of the shock absorber when in use and by the abnormal backlash detectable through a manual test.

The main causes are:

Errors during the assembly:
the wrong tightening torque and the backlash in case of inadequate tightening, deformed material due to the excessive tightening;

Incorrect vehicle application:
in case of incorrect product identification and different dimensions from the original part, the abnormal forces of traction and compression can lead to the bushing elongation.

*The OE references and pictures are for illustrative purpose.

MEMBRANA DANNEGGIATA

Per membrana danneggiata si intende la presenza di danni alla parte gommosa degli ammortizzatori pneumatici.

È riconoscibile dalla presenza di battito oppure di poca o nulla assistenza all'alzata della cabina.

La causa principale del danneggiamento della membrana è:

Urto di detriti:
in fase di marcia, i detriti che possono accidentalmente colpire le membrane ne causano la foratura o la completa rottura impedendone il corretto funzionamento

DAMAGED MEMBRANE

It refers to the presence of damages in the rubber part of the pneumatic shock absorbers.

These signs of wear are recognizable by the knocking or the lack of assistance to the cab lifting.

The main cause of the membrane damaging is:

Impact with debris:
while driving, the road debris can accidentally hit the membranes and cause drilling or their full breaking preventing the proper functioning of the shock absorber.

Esempio di materiale difettoso
Example of faulty material

*The OE references and pictures are for illustrative purpose.
